The best end of trip facilities start with TZ

End-of-trip facilities are becoming a fundamental design consideration for commercial developments and refurbishments in the Australian commercial real estate industry.

TZ SMArt Lockers offer a flexible, modular storage solution that can be easily scaled to suit a range of technical and budgetary requirements.

As leaders in smart locking device technology, TZ SMArt Locker solutions provide propriety 'plug and play' locking devices that are simple to install and maintain – resulting in real-time monitoring, reporting and management capabilities unlike any other.

Smart enough for automated building management yet easy enough for everyday use, TZ SMArt Lockers are the experts in end of trip locker solutions.

Flexible Design

TZ's modular infrastructure allows for configuration flexibility to suit individual organisational needs. Whether the design specification calls for metal or millwork, TZ can deliver a reliable, hardwired locking solution capable of in-locker USB charging and illumination.

Smart Reservation Options

TZ SMArt Locker solutions enable our clients to customise locker usage and management. Our system allows for both permanent and guest reservation options within the same locker bank. Permanently allocate a locker to building employees while offering guests the option to make a reservation at the locker bank for a specific time period.

Dynamic Software Platform

TZ's SMArt locking devices are driven by a dynamic software platform that can be adapted to the needs of every client. Our capability extends from a simple, standalone system to a fully data integrated solution with custom UI workflows.

Complete Administration Control

TZ's intuitive software enables simple administrative control, making it easy for every user to perform tasks with minimal training. Locker reports can be filtered and exported to assist with locker allocation and maintenance decisions. Ot take advantage of our comprehensive networked solution with full hierarchal control, allowing for various users with different administrative privileges.

tz SMArt™ Lockers

Think SMArt. Think TZ.
